

St. Francis' Catholic Primary School Science progression of skills

Science Intent

Science provides the foundation for understanding the world around us. Engaging children's natural curiosity, imagination and excitement; science enables children to explore, learn and make sense of the world they live in. Our creative science curriculum will enable children to gain positive attitudes towards scientific knowledge and investigative processes; to understand both the uses and implications of science today, and in the future.

EYFS –see Development Matters 2021 for detailed examples of how to support learning in EYFS

<u>Understanding the world</u> involves guiding children to make sense of their physical world and their community. The frequency and range of children's personal experiences increases their knowledge and sense of the world around them – from visiting parks, libraries and museums to meeting important members of society such as police officers, nurses and firefighters. In addition, listening to a broad selection of stories, non-fiction, rhymes and poems will foster their understanding of our culturally, socially, technologically and ecologically diverse world. As well as building important knowledge, this extends their familiarity with words that support understanding across domains. Enriching and widening children's vocabulary will support later reading

	0-3 YEARS	3-4 Y	EARS	Receptior	n Class
Explore natuExplore and	rials with different properties. al materials, indoors and outside. espond to different natural n their setting and on trips(awe an	 natural materials. Explore collections of a different properties. Talk about what they s Talk about what they s Explore how things wo Plant seeds and care for Understand the key fer plant and an animal. Begin to understand the for the natural environ 		 of development will: Explore the natural observations and oplants; Know some similar the natural world a environments, dra what has been rea Understand some in the natural worl 	d Children at the expected level I world around them, making drawing pictures of animals and rities and differences between around them and contrasting wing on their experiences and d in class; important processes and changes d around them, including the ging states of matter.
Areas of Yea study	1 Year 2	Year 3	Year 4	Year 5	Year 6

Seasonal Change	 Observe changes across the four seasons. Observe and describe weather associated with the seasons and how day length varies 		
Animals including Humans	 Identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals. Identify and name a variety of common animals that are carnivores, herbivores and omnivores. Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets). Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. Understand that animals, including humans, have offspring which grow into adults Describe the basic needs of animals, including humans, for survival (water, food and air). Describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene 	 Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. Identify that humans and some other animals have skeletons and muscles for support, protection and movement Describe the simple functions of the basic parts of the digestive system in humans. Identify the different types of teeth in humans and their simple functions. Construct and interpret a variety of food chains, identifying producers, predators and prey 	 Describe the changes as humans develop to old age. Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood. Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function. Describe the ways in which nutrients and water are transported within animals, including humans

Everyday Materials	ma ide ma ide ma va va ev sir ide va va va va va va by by	vistinguish between an object and the naterial from which it is made. dentify and name a variety of everyday naterials, including wood, plastic, glass, netal, water, and rock. Describe the simple physical properties of a ariety of everyday materials. Toompare and group together a variety of veryday materials on the basis of their imple physical properties dentify and compare the suitability of a ariety of everyday materials, including vood, metal, plastic, glass, brick, rock, paper nd cardboard for particular uses. Describe how the shapes of solid objects nade from some materials can be changed y squashing, bending, twisting and tretching.		9 9 9 9	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets Recognise that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic Demonstrate that dissolving, mixing and changes of state are reversible changes Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated
Living things and their Habitats	be thi to dif of f ho an ha G De pla sir	xplore and compare the differences etween things that are living, dead, and hings that have never been alive. dentify that most living things live in habitats o which they are suited and describe how ifferent habitats provide for the basic needs f different kinds of animals and plants, and ow they depend on each other. dentify and name a variety of plants and nimals in their habitats, including micro- abitats. vescribe how animals obtain their food from lants and other animals, using the idea of a imple food chain, and identify and name ifferent sources of food.	 Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that environments can change and that this can sometimes pose dangers and have an impact on living things. 	9 9 9	with burning and the action of acid on bicarbonate of soda Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. Describe the life process of reproduction in some plants and animals. Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals. Give reasons for classifying plants and animals based on specific characteristics.

Plants	 Identify and name a variety of common wild and garden plants, including deciduous and evergreen trees. Identify and describe the basic structure of a variety of common flowering plants, including trees. Observe and describe how seeds and bulbs grow into mature plants. Find out and describe how plants need water, light and a suitable temperature to grow and stay healthy. 	 Identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers. Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant. Investigate the way in which water is transported within plants. Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal. Identify common appliances that run on 	Associate the brightness of a lamp or the volume of
Electricity		 Identify common appliances that full on electricity. Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. Recognise some common conductors and insulators, and associate metals with being good conductors. 	 Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit. Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches. Use recognised symbols when representing a simple circuit in a diagram.

Forces And Magnets	 Compare how things move on different surfaces. Notice that some forces need contact between two objects, but magnetic forces can act at a distance. Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. Describe magnets as having two poles Predict whether two magnets will attract or repel each other, depending on which poles are facing. 	 Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object. Identify the effects of air resistance, water resistance and friction, that act between moving surfaces. Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect. Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird Describe the life process of reproduction in some plants and animals.
Light	 Recognise that he/she needs light in order to see things and that dark is the absence of light. Notice that light is reflected from surfaces. Recognise that light from the sun can be dangerous and that there are ways to protect eyes. Recognise that light from the sun can be dangerous and that there are ways to protect eyes. Find patterns in the way that the size of shadows change 	 Recognise that light appears to travel in straight lines. Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.
Sound	 Generating the sounds are made, associating some of them with something vibrating. Generating that vibrations from sounds travel through a medium to the ear. Generating Find patterns between the pitch of a sound and features of the object that produced it. Generating Find patterns between the volume of a sound and the strength of the vibrations that produced it. Generating Recognise that sounds get fainter as the distance from the sound source increases 	

Rocks	 Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Describe in simple terms how fossils are formed when things that have lived are trapped within rock. Recognise that soils are made from rocks and organic matter. 	
States Of Matter	 Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Describe in simple terms how fossils are formed when things that have lived are trapped within rock. Recognise that soils are made from rocks and organic matter. 	 Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets Recognise that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic Demonstrate that dissolving, mixing and changes of state are reversible changes Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda
Earth And Space		 Describe the movement of the Earth, and other planets, relative to the Sun in the solar system. Describe the movement of the Moon relative to the Earth. Describe the Sun, Earth and Moon as approximately spherical bodies. Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky

Evolution And Inheritance			Û	Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago.
